Lesson 2 · Overtime and penalty rates

Answers

Pay = base rate × multiplier × hours

Ella's café: weekday × 1 | Saturday (time and a half) × 1.5 | Sunday (double time) × 2 | public holiday (double time and a half) × 2.5

Show your working in each box.

Q1 Mia earns $24 per hour. This week she worked:

Day	Hours	Rate
Tuesday	5 h	normal
Saturday	6 h	time and a half
Monday (public holiday)	4 h	double time and a half

(a) Find Mia's hourly rate on each day.

Tuesday: $24

Saturday: $24 × 1.5 = $36

Public holiday: $24 × 2.5 = $60

(b) Find her total pay for the week.

Tuesday: $24 × 5 = $120

Saturday: $36 × 6 = $216

Public holiday: $60 × 4 = $240

Total: $120 + $216 + $240 = $576

Q2 Ali worked 6 hours on a Saturday at time and a half and was paid $243. What is Ali's base hourly rate?

$243 ÷ 6 = $40.50 per hour at time and a half

$40.50 ÷ 1.5 = $27 base rate

Check: $27 × 1.5 × 6 = $243

Q3 Liam (base rate $26.44) works 3 hours of overtime on Thursday. Use the pay guide rule (first 2 hours at time and a half, after that double time) to find his overtime pay.

First 2 hours: $26.44 × 1.5 = $39.66, and $39.66 × 2 = $79.32

Third hour: $26.44 × 2 = $52.88

Total: $79.32 + $52.88 = $132.20

Extension Mia (base rate $24) is offered two ways to be paid for a 6-hour Saturday shift. Option A is time and a half. Option B is her normal rate plus a flat $50 bonus.

(a) Which option pays more, and by how much?

Option A: $24 × 1.5 × 6 = $216

Option B: $24 × 6 + $50 = $194

Option A pays $216 − $194 = $22 more

(b) For what length of shift would the $50 bonus pay more?

Time and a half adds $24 × 0.5 = $12 an hour

4 hours: 4 × $12 = $48, less than $50

5 hours: 5 × $12 = $60, more than $50

The $50 bonus pays more for shifts of 4 hours or less
