Exit ticket · Lesson 1 — Answers

(a) Draw a line from each term to its meaning.

(b) Noah earns $350 per week plus 4% commission on his sales. This week he sold $5,000 of goods. What is his total pay?

0.04 × $5,000 = $200
$350 + $200 = $550

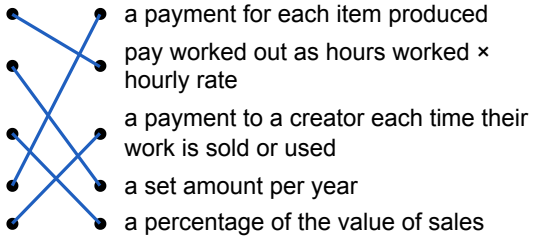

(c) Tick the ones you can now do.

- ☐ I can **describe** the difference between a wage, a salary, commission, piecework and a royalty
- ☐ I can **calculate** a wage from an hourly rate and the hours worked
- ☐ I can **calculate** earnings from commission, piecework and royalties, and work backwards from total pay to find sales

For any you cannot tick, write the step that is still unclear.
